

# Mosquito Problems Solved

## Why Regular Check Ups from a Pro Make a Difference

Here is a brief overview of how a prevention plan can benefit your property and family instead of waiting for issues to arise.

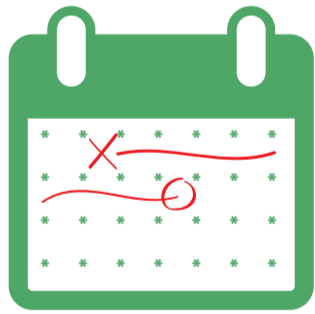

### Mosquitos

The National Pest Management Association (NPMA) is urging the public to take necessary safety precautions against these potentially dangerous insects. As vectors of disease, mosquitoes can spread viruses such as EEE by feeding on infected animals and humans.<sup>1</sup>

### Offense is the Best Defense

The CDC helped eliminate malaria as a major public health problem in the United States in the late 1940s. However, it reports that approximately 1,500 cases of malaria are documented each year in the United States due to imported cases, mainly from travelers.<sup>3</sup>

### A Shield to Keep Family Healthy

The Graduate Mosquito & Tick Reduction Program includes five scheduled treatments to help prevent disease-carrying insects from infesting your property from May to October – when you need the protection the most.

**NPMA**

### Eastern Equine Encephalitis (EEE)

EEE virus is a rare cause of brain infections (encephalitis).

Approximately 30% of people with EEE die and many survivors have ongoing neurologic problems.<sup>2</sup>

**1,500**  
cases of Malaria  
each year

### Graduate Pest Solutions has you covered

Mosquitoes breed in stagnant water and have an extremely fast life cycle allowing for quick population growth. Mosquito larvae hatch within a few days and a full adult develops in 10 to 14 days from hatching.<sup>4</sup>
